1. SUMMARY

1. SUMMARY

GENERAL

This booklet is being submitted as the final intact stability booklet for a twin screw diesel motor yacht refitted at De Vries Makkum in 2011. The refit comprised complete new interior and engineering items.

The yacht was originally built at the De Vries Shipyard under yard number 583. This report shows the results of the intact stability calculations.

The calculations were performed with lightship weight and centre's of gravity as established from an inclining experiment performed on February 17st 2011.

A copy of this inclining experiment is also included in this document.

INTACT STABILITY RESULTS:

In all loading conditions, the motor yacht complies with the intact stability criteria as described by the ISO 12217-1 code.

2. INTRODUCTION TO INTACT STABILITY

2.9 LIGHT SHIP HISTORY

2. INTRODUCTION TO INTACT STABILITY

2.1. GENERAL PARTICULARS

Yacht's name	:	Serena
Flag	:	Maltese
Category	:	Design category B
Port of Registry	:	Valetta
Builder's name	:	De Vries Shipyard
Yard no:	:	583
Delivered	:	1964
Call sign	:	9H9617

2.2. PRINCIPAL DIMENSIONS

Length o.a	:	22.50	m
LWL	:	19.90	m
Beam mld	:	5.10	m
Depth mld	:	3.25	m

Lightship weight	:	54.20	ton
LCG	:	9.55	m
VCG	:	2.25	m
TCG	:	0.00	m

Common reference	X	:	frame 0
	Y	:	centre line plane
	Z	:	baseline

Aft perpendicular	:	0.00m	aft of frame 0
Fore perpendicular	:	19.90m	fwd frame 0

2.3. LOADING CONDITIONS

This yacht has been provided with 400kg of fixed ballast for compensating heel. The TCG of the light ship weight used for the stability calculations is 0.0m off center line, as after completion of the refit the yacht had with the prescribed amount of ballast no heel with the black water and lube oil tank empty.

To limit trim forward, fuel is to be used first from the forward fuel tank and fuel level in the aft fuel tank should not be less than 50%.

The following loading conditions were defined. For these loading conditions the intact stability was assessed for:

- Light loaded condition (10% FO - 10% FW)
- Half loaded condition (50% FO - 50% FW)
- Fully loaded condition (100% FO - 100% FW)

These are the most common loading conditions.

In all conditions at least one fuel oil tank and the fresh water tank is taken as slack. The calculated righting arms reflect the actual variation of the centre of gravity caused by the slack tanks.

2.4. ADOPTED CRITERIA

In the following stability calculations, the intact stability was assessed using the criteria described in the EN ISO 12217-1 code for design category B option 1.

These criteria can be summarised as follows:

1. Freeboard to down flooding point >1.32m (see also chapter 8.3)
2. Angle from equilibrium to flood $\Phi_{D(R)} > \Phi_0 + 15 = 11.32 + 15 = 26.32^\circ$
3. Rolling in waves and wind area $A2 > A1$
4. Righting moment at $\Phi_{30^\circ} > 7\text{kNm}$
5. Righting arm at $\Phi_{30^\circ} > 0.2\text{m}$

2.5. NOTES TO THE MASTER

2.5.1. GENERAL INSTRUCTIONS

The yacht was assigned for design category B and is considered to be designed for waves of up to 4 m significant height and a wind of Beaufort force 8 or less.

The loading conditions shown in this booklet represent typical service conditions. Where a loading condition departs from those shown in this book a separate calculation should be made to ensure compliance with the stability criteria.

A copy of this booklet must be kept on board the vessel at all times. It must also be complete and readily available for use. If this booklet is lost or becomes unusable a replacement copy of the booklet must be obtained immediately.

In chapter 3 of this report, a standard form is added for calculating centers of gravity and loading conditions. This form includes a detailed step-by-step explanation (chapter 3.1).

Note that through minor openings such as chain pipes small quantities of water can enter the vessel. The bilge pump capacities are sufficient to counteract this. Bilge pump arrangements are to be standby.

2.5.2. GENERAL STABILITY REQUIREMENTS

It is important to ensure that in any sailing condition the stability of the yacht complies with the criteria of section 2.4.

This yacht has been provided with 400kg of fixed ballast for compensating heel. This ballast is not to be moved or removed without prior consultation. Should the ballast be required to be removed for survey/repair or any other reason it must be returned to its original position and secured.

2.5.3. PRECAUTIONS AGAINST CAPSIZING

Compliance with the stability criteria does not ensure immunity against capsizing or absolve the master from his responsibilities. Masters should therefore exercise prudence and good seamanship having regard to the season of the year, weather forecasts and the navigational zone and should take the appropriate action as to speed and course warranted by the prevailing circumstances.

Before a voyage commences care should be taken to ensure that the stores and sizeable pieces of equipment have been properly stowed or lashed so as to minimize the possibility of both longitudinal, and lateral shifting while at sea, under the effect of acceleration caused by rolling and pitching.

All external hull doors and flush hatches are to be closed and secured. If poor weather is likely to be encountered during the passage additionally storm boards and shutters should be fitted.

The number of slack tanks should kept to a minimum.

FINAL INTACT STABILITY INFORMATION BOCKLET

2.5.4. OPERATION RESTRICTIONS

Note that the area of operation is only restricted in commercial use.

Area of operation in commercial use : 60 miles from a safe haven

2.5.5. DAMAGE STABILITY

This vessel has not been assessed for damage stability and therefore might not remain afloat in the event of damage or flooding.

2.5.6. MASTERS SHIPBOARD PROCEDURES

- IN SHELTERED ANCHORAGES AND IN PORT:

- The master is responsible for evaluating the risks and hazards present and taking appropriate precautions.

- PREPARING FOR SEA:

- Sidelights capable of being opened are to be secured closed.
- External hatches are to be closed, secured and recorded.
- Internal hinged WT doors are to be closed and secured.

- PREPARING FOR ROUGH WEATHER PASSAGE:

- The master is responsible for taking appropriate precautions whenever rough weather is anticipated.
- The precautions should include the following:
 - All loose gear (including tenders etc.) on deck, and in the technical space / locker room are to be securely lashed in place.
 - Large or heavy items of furniture to be secured.
 - The shutters provided are to be put up over the windows.
 - Deadlights are to be closed and secured.
 - Secure closing devices as appropriate.

- AT SEA:

- Hinged watertight doors are to be kept closed at sea at all times. They may be opened briefly to pass through the door, but should be closed immediately.

2.5.7. NOTES ON THE USE OF FREE SURFACE MOMENTS

Provided a tank is completely filled with liquid no movement of the liquid is possible and the effect on the ship's stability is precisely the same as if the tank contained solid material.

Immediately, after a quantity of liquid is withdrawn from the tank the situation changes completely and the stability of the ship is reduced by what is known as the "free surface effects". This reduction of the stability is referred to as a "loss in GM" or as a "virtual rise in V.C.G." and is calculated as follows:

$$\text{Virtual rise in VCG/ Loss of GM} = \frac{\text{Free Surface Mmt(Tonnes m)}}{\text{Vessel Displacement(Tonnes)}}$$

FINAL INTACT STABILITY INFORMATION BOCKLET

2.5.8. NOTES ON THE USE OF RIGHTING LEVER TABLES

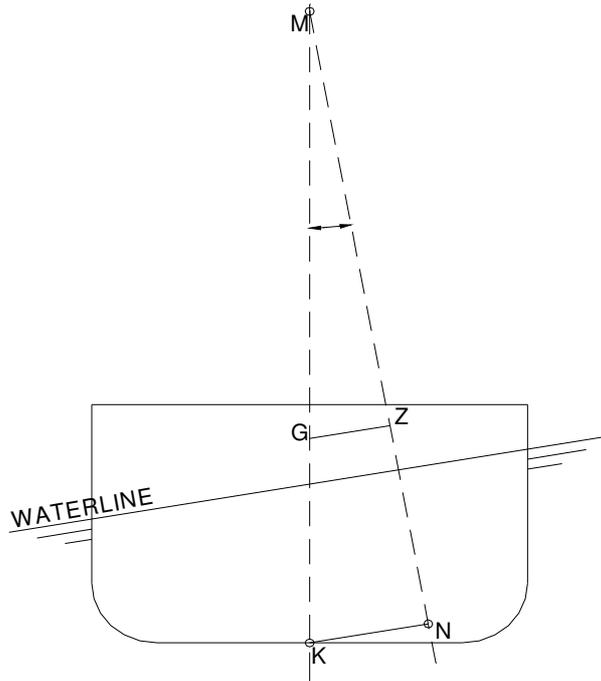

Righting lever tables for displacements of 50 to 70 tons are presented in chapter 6 for angles of heel at intervals between 0 and 70 degrees.

To obtain GZ curves at a given displacement, the following equation should be used:

$$GZ = KN - KG \sin \phi$$

Where KN is the righting lever given in the tables in chapter 6.

This enables the value of GZ to be calculated at each of the heel angles presented, and subsequently plotted as in the loading conditions presented herein.

FINAL INTACT STABILITY INFORMATION BOCKLET

2.6. ANGLES OF DOWN FLOODING

The angle of down flooding is the angle of heel at which progressive down flooding of the yacht will occur due to the immersion on an opening. Where ">Righting arm" is indicated, flooding occurs at an angle after the righting arm diminishes to 0.

For this yacht the flowing openings and down flooding angles have been identified:

No.	Flood point	Location			Angle of Immersion (Intact) [deg]		
		LCG [m]	TCG [m]	VCG [m]	Light Load Condition	Half Load Condition	Fully Loaded Condition
1	Air in / outlet engine room	9.80	3.15	3.07	33.76	32.97	31.88
2	Air intake guest staterooms	0.15	1.10	3.54	> Righting Arm	87.82	85.28
3	Galley exhaust	14.79	1.45	3.73	68.49	68.00	66.54
4	Air intake crew	19.60	1.50	3.80	64.40	64.06	63.14
5	Air intake guest bathrooms	9.80	2.00	3.57	55.15	54.19	52.91
6	Air exhaust guest bathrooms	3.60	1.20	3.38	83.88	81.49	78.84
7	Door wheelhouse aft	4.80	1.30	3.46	79.44	77.34	74.97
8	Door wheelhouse side	7.60	1.65	3.44	64.38	62.99	62.00
9	Sliding hatch crew entrance	18.30	0.30	4.03	> Righting Arm	> Righting Arm	> Righting Arm
10	Chainpipes	19.70	0.20	3.82	> Righting Arm	> Righting Arm	> Righting Arm

2.7. SPECIAL NOTES REGARDING THE STABILITY AND LOADING OF THE YACHT

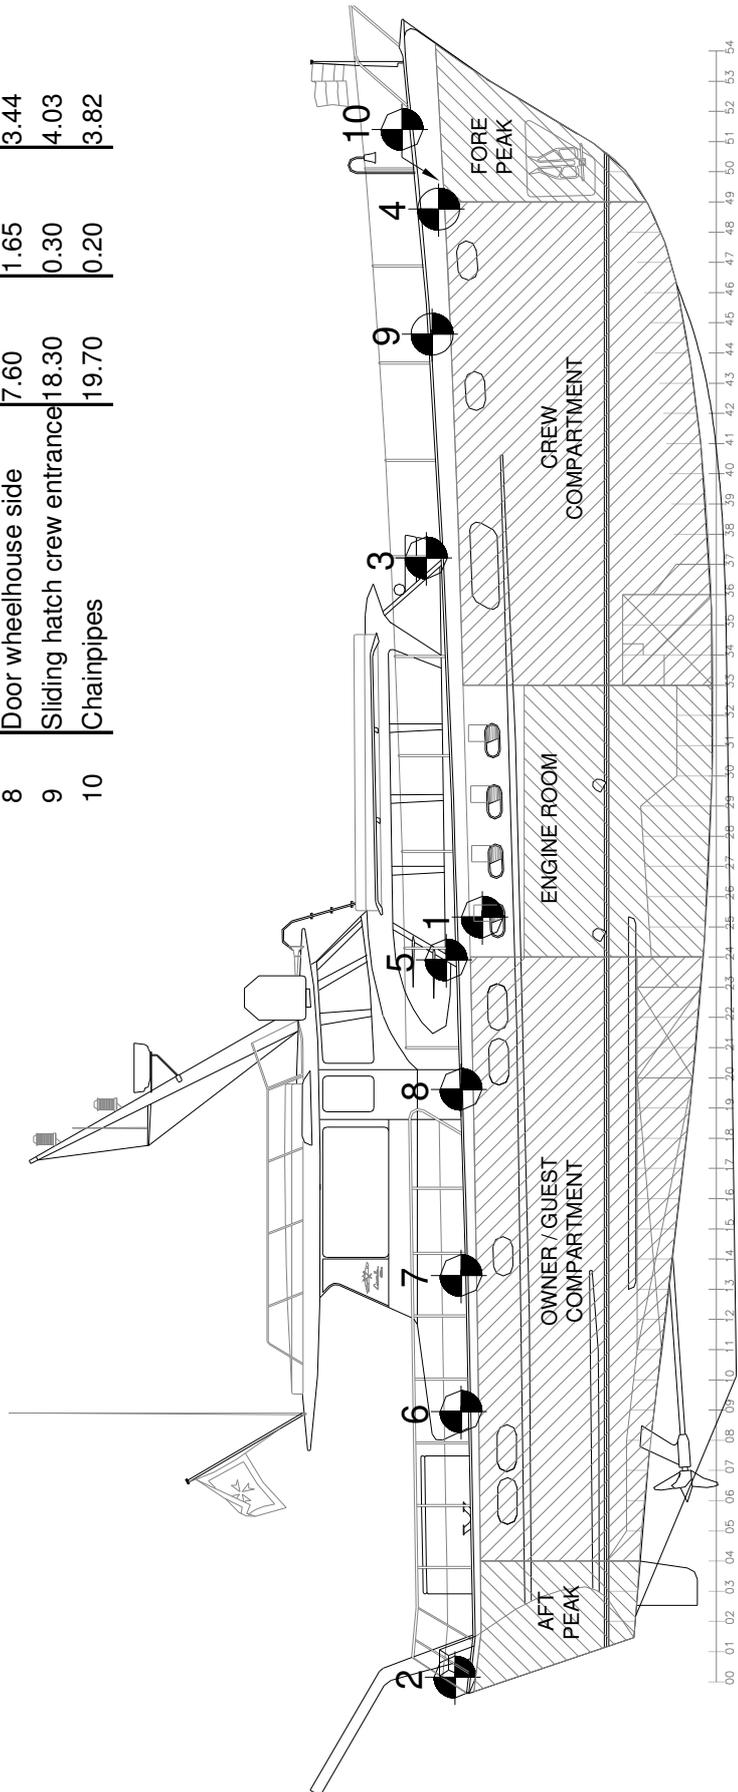

The following pages give an overview of the intact stability of the yacht in various loading conditions. Please note the following when interpreting the results of the calculations:

- Draught is measured from the baseline.
- All dimensions are in metres.
- The centres w.r.t frame 0, baseline and centreline
- All displacements and weights are in metric tons
- The buoyant spaces, down flooding points used in the calculations for determining the range of stability are shown in chapter 2.8.
- The flooding points are defined either all on the starboard side, or all on the port side of the ship depending on what side the ship heels to in the calculations.
- Down flooding points for the intact stability calculations are taken at:
 - Air in / outlet engine room
 - Air intake guest staterooms
 - Galley exhaust
 - Air intake crew
 - Air intake guest bathrooms
 - Air exhaust guest bathrooms
 - Door wheelhouse aft
 - Door wheelhouse side
 - Sliding hatch crew entrance
 - Chainpipes
- Theoretical tank volumes and quantities are used in the stability calculations; calibrated values due to suction losses are not accounted for.
- For the extreme draught add 290 mm.

2.8. BUOYANT SPACES & FLOODING POINTS

BUOYANT SPACES & FLOODING POINTS

No.	Flooding Points	X	Y	Z
1	Air in / outlet engine room	9.80	3.15	3.07
2	Air intake guest staterooms	0.15	1.10	3.54
3	Galley exhaust	14.79	1.45	3.73
4	Air intake crew	19.60	1.50	3.80
5	Air intake guest bathrooms	9.80	2.00	3.57
6	Air exhaust guest bathroom	3.60	1.20	3.38
7	Door wheelhouse aft	4.80	1.30	3.46
8	Door wheelhouse side	7.60	1.65	3.44
9	Sliding hatch crew entrance	18.30	0.30	4.03
10	Chainpipes	19.70	0.20	3.82

3.1 EXPLANATION AND NOTES ON COMPLETING SAMPLE STABILITY FORM

3.1.1. TABLE 1. CALCULATING THE DISPLACEMENT AND CENTRES OF GRAVITY

1. Fill in the weights in column 3 (Weight) [unit: metric tons]
2. Fill in the longitudinal and vertical centre of gravity in columns 4 (LCG) and columns 6 (VCG) [unit: m]
3. Multiply the weight of each item by its centre to get the longitudinal and vertical moments and enter the moment in column 5 (L-Moment) and 7 (V-Moment)
4. From the tank capacity plan and tank capacities (Chapter 4) enter the tank weights into column 3 (Weight), LCG's into column 4 (LCG), VCG's in column 6 (VCG) and FSM's in column 8 (FSC) [units: metric tons, meters and metric ton-meters]
5. Multiply the weight of the tanks by its centre of gravity to get the longitudinal and vertical moments and enter these moments in column 5 (L-Moment) and 7 (V-Moment)
6. Sum up columns 3, 5 and 7 and enter the total in the "dead weight" row.
7. Add dead weight mass to light ship mass and enter the new total in the "total displacement" row, column 3
8. Add dead weight L-moment to light ship L-Moment and enter the new total in the "total displacement" row, column 5
9. Add deadweight V-Moment to light ship V-Moment and enter the new total in the "total displacement" row, column 6
10. Divide total displacement L-moment by the total displacement Weight, to calculate the estimate overall LCG for this loading condition. Fill in the result in column 4 (LCG)
11. Divide total displacement V-Moment by the total displacement Weight, to calculate the estimate overall VCG for this loading condition. Fill in the result in column 6 (VCG)
12. Sum up column 8 (FSM) and enter the total into "total displacement" row, column 8

3.1.2 TABLE 2. CALCULATING THE STABILITY

13. Transfer the value of the overall displacement and VCG from table 1 to table 2. Calculate the total free surface correction by dividing total FSM by overall displacement and enter in table 2 under FS-corr.
14. Estimate fwd and aft draught, and enter values in table 2
15. Subtract fwd draught from aft draught and enter trim value in table (note that trim bow down is negative, bow up is positive)
16. From the tables with hydrostatic data (Chapter 5), select the table with trim closest to the estimated trim. At the calculated displacement determine the value of Draught (at 28.85m), KMT, LCB and MT-cm (Moment to change trim by 1 cm) and enter these in tables 2 and 3. Note that the draught at 28.85 is the draught amidships
17. Subtract the overall VCG value in table 2 from KMT to obtain GMT (solid) and enter the result in table 2
18. Subtract the overall FS-corr value from table 1 from GMT (solid) to obtain GMT (fluid), and enter the value in table 2
- 19.

3.1.3 TABLE 3. CALCULATING THE TRIM

20. Transfer the value of the overall LCG from table 1 to table 3
21. Subtract the LCG from the LCB to obtain the trim lever
22. Multiply the displacement by the trim lever to obtain trim moment.
23. Divide trim moment by MT-cm to obtain the trim correction.
24. Calculate trim by adding trim correction to estimated trim.
25. Divide the trim by 2, and add this to the draught amidships to obtain the draught aft
26. Divide the trim by 2, and subtract this from the draught amidships to obtain the draught forward

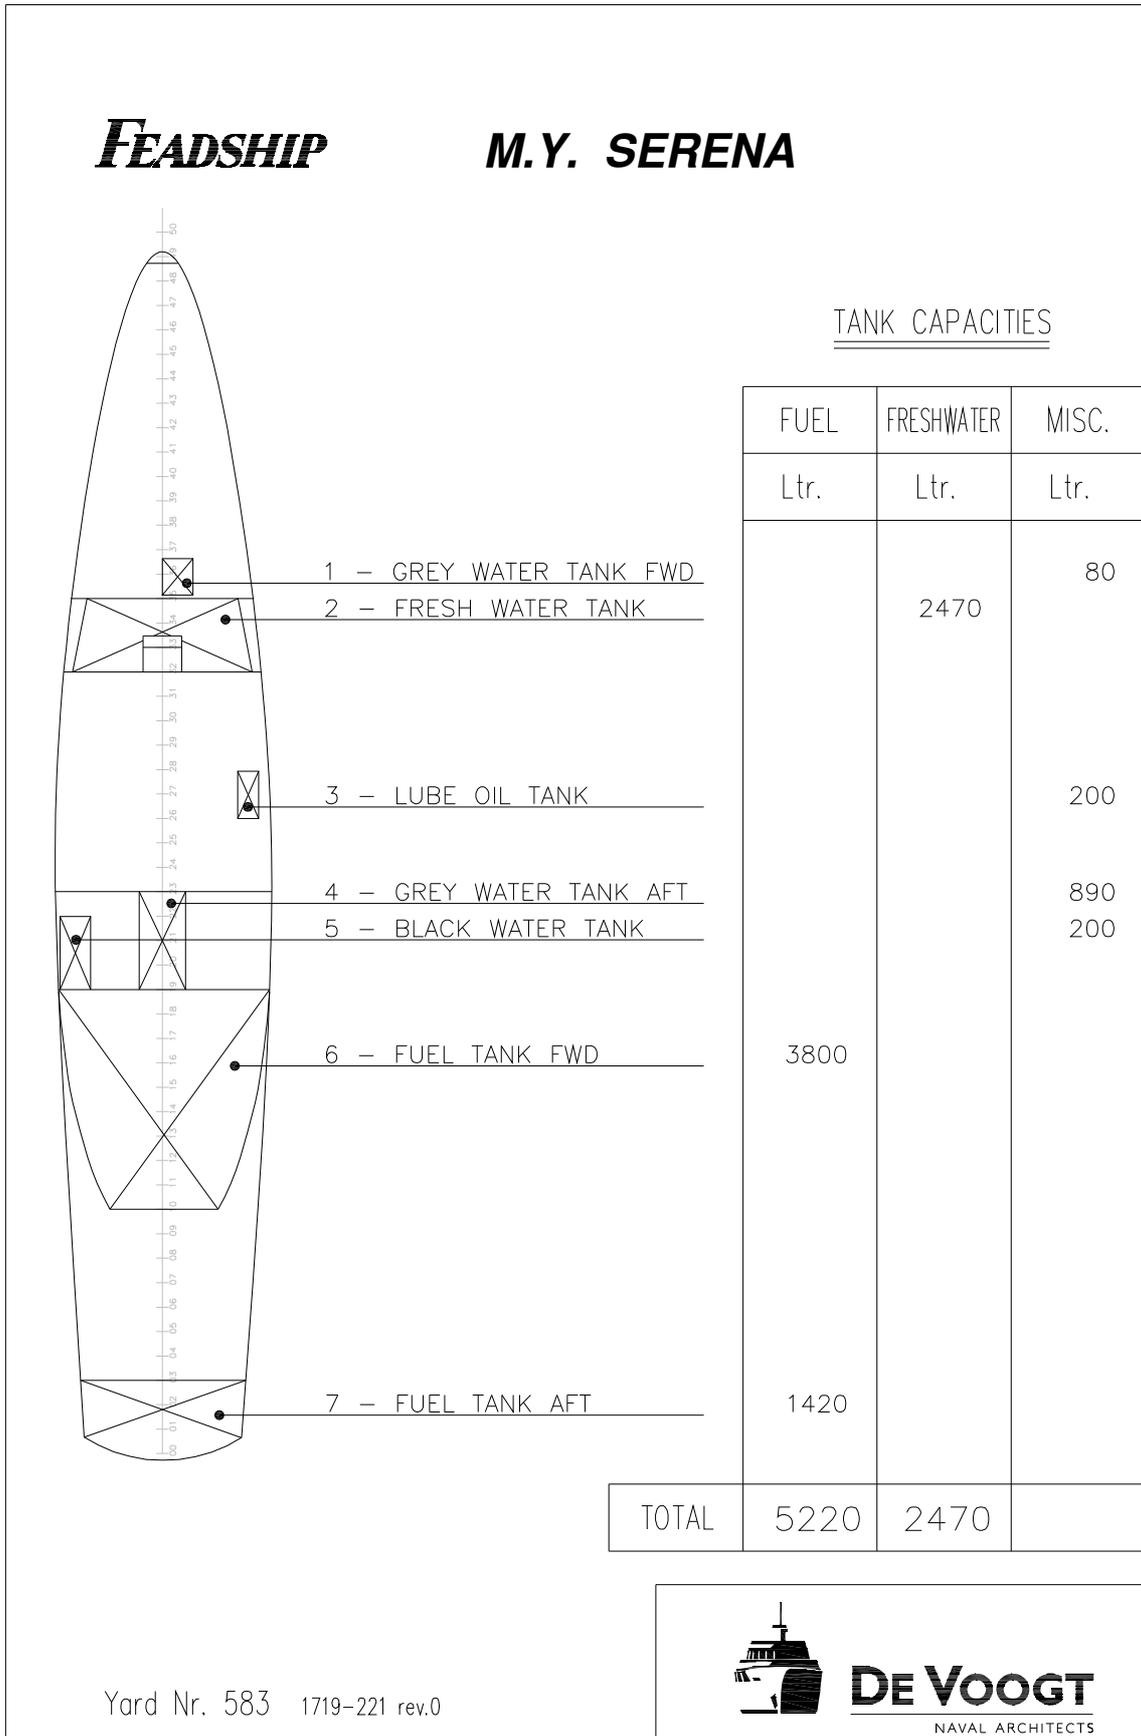

If the trim correction in step 22 is more than 20cm an additional calculation is recommended departing from step 15 and using an estimated trim being that found in step 23.

4. TANK CAPACITIES

The presented tank plan on the next page shows the theoretical tank volumes.

Values / quantities shown in the stability- and capacity- calculations in this booklet are theoretical tank volumes and don't account for suction losses.

4. TANK CAPACITIES

7. INTACT STABILITY RESULTS

- 7.1. ARRIVAL CONDITION
- 7.2. HALF LOADED CONDITION
- 7.3. DEPARTURE CONDITION

7. LOADING CONDITIONS

7.1. ARRIVAL CONDITION

The results of the intact stability calculations for the 10% - 10% condition are shown hereafter. Summarising these results in terms of static and dynamic stability requirements yields the following table.

Item	Design	Criteria ISO	Unit
Draught Fore *	1.675		m
Draught Aft *	1.540		m
Displacement	58.95		tonnes
R.A at 30 deg	0.324	0.02	m
Freeboard to downflooding point	1.372	1.32	m
Initial Stability	0.934		m
Pos righting lever	>90.00		deg
DFA = Down flooding angle	33.76	26.32	deg

* For the extreme draught add 290 mm

7.3. DEPARTURE CONDITION

The results of the intact stability calculations for the fully loaded condition are shown hereafter. Summarising these results in terms of static and dynamic stability requirements yields the following table.

Item	Design	Criteria ISO	Unit
Draught Fore*	1.756		m
Draught Aft*	1.600		m
Displacement	64.36		tonnes
R.A at 30 deg	0.380	0.02	m
Freeboard to downflooding point	1.390	1.32	m
Initial Stability	0.884		m
Pos righting lever	>90.00		deg
DFA = Down flooding angle	31.88	26.32	deg

* For the extreme draught add 290 mm

8. OTHER STABILITY CRITERIA

8. OTHER STABILITY CRITERIA

8.1 ANGLE OF HEEL DUE TO CROWDING OF GUESTS ON ONE SIDE

8.2 RESISTANCE TO WIND AND WAVES

8.3 MINIMUM FREEBOARD TO DOWNFLOODING POINT

8.4 DOWNFLOODING HEIGHT TEST

FINAL INTACT STABILITY INFORMATION BOCKLET

8.1 ANGLE OF HEEL DUE TO CROWDING OF GUESTS ON ONE SIDE

ISO 12217-1 6.2

These criteria can be summarised as follows:

- Max heel angle $\Phi_{O(R)} < 11.5 + (24 - L_H)^3 / 520 = 11.51^\circ$
- Residual freeboard $> 0.145B_H = 0.74\text{m}$

Righting Arms vs. Heel - ISO REQUIREMENTS (ISO 12217-1)

8.2 RESISTANCE TO WIND AND WAVES

8.2.1 INTRODUCTION TO THE CALCULATIONS

The following part of this report presents the calculation of the resistance to wind and waves. The calculations were performed as described in ISO 12217-1, 6.2.

These criteria can be summarised as follows:

- Rolling in waves and wind area $A_2 > A_1$
- Righting moment at $\Phi=30^\circ > 7\text{kNm}$
- Righting arm at $\Phi=30^\circ > 0.2\text{m}$

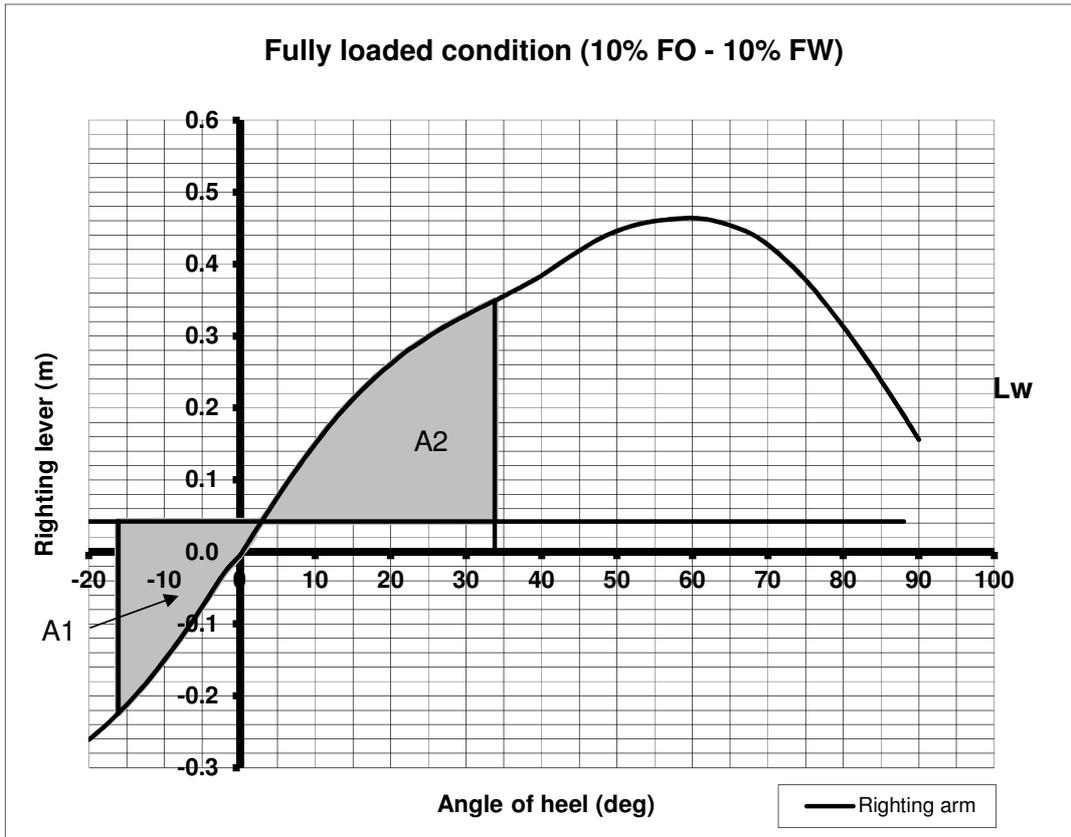

8.2.2 RESULTS OF THE CALCULATIONS

The results are presented for the light loaded, half loaded & fully loaded condition condition:

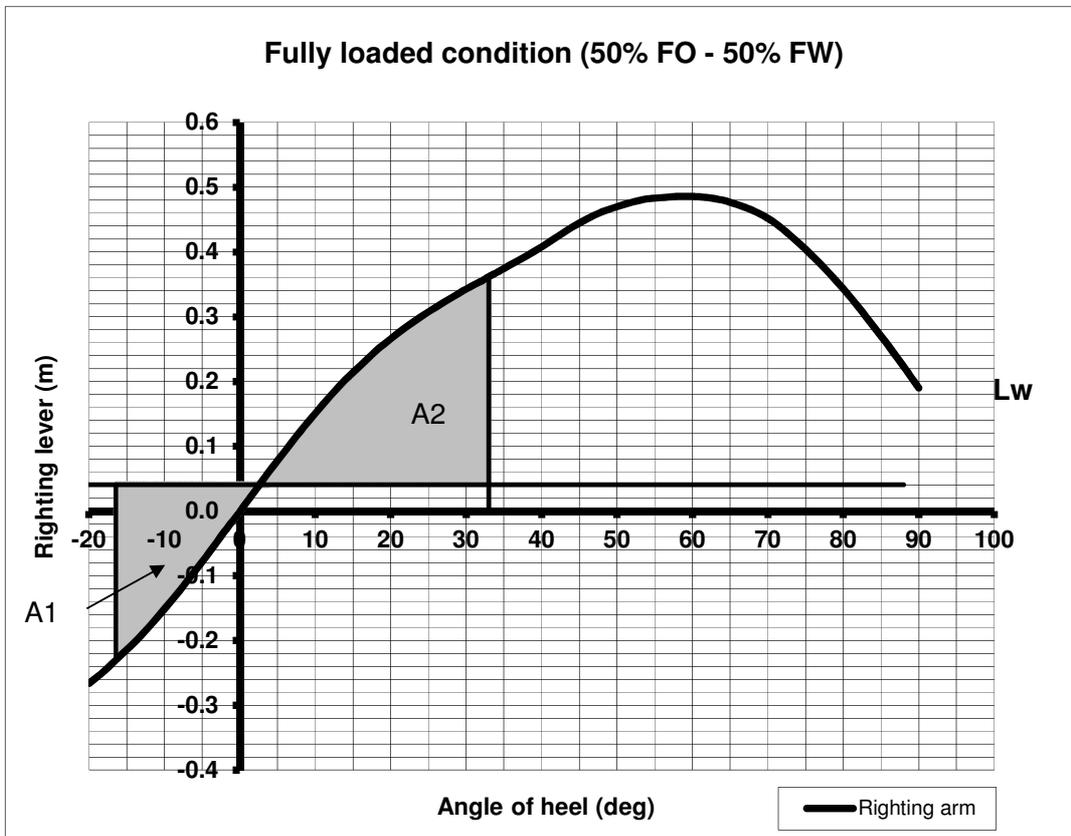

Resistance to wind and waves				
	Unit	100%-100%	50%-50%	10%-10%
Windspeed	m/s	21	21	21
loa	m	22.50	22.50	22.50
lwl = L	m	19.90	19.90	19.90
draft = d	m	1.68	1.64	1.61
displ	ton	64	61	59

FINAL STABILITY INFORMATION BOCKLET

1. GENERAL DATA

1.1 MAIN DIMENSIONS

Length overall	22.50
Length waterline	19.90
Beam	5.10
Depth (mld)	3.25

1.2 REFERENCES

LCG	Relative to frame 0
TCG	Relative to CL, starboard is positive
VCG	Relative to baseline

1.3 ENVIRONMENTAL CONDITIONS:

Date:	17.2.2011
Location:	De Vries Makkum
Weather and wind:	light wind

1.4 WITNESSES OF INCLINING TEST:

Classification society:

Owner's representative:

1.5 INCLINING TEST PERFORMED BY:

De Voogt naval architects:

Shipyard

1.6 PENDULUMS:

Location pendulum 1:

Length of pendulum 1:

Location pendulum 2:

Length of pendulum 2:

1.7 DENSITY WATER:

Reading hydrometer:

1.8 GENERAL REMARKS:

- At the inclining test the yacht was floating freely with all mooring lines slack.

1.9 LOADING CONDITION DURING INCLINING TEST

- Yacht complete, except for the items as described in "to be added"
- Systems full
- Tank loading as reflected in "TANKS"

FINAL STABILITY INFORMATION BOCKLET

Appendix III Abbreviations and conversion tables

APPENDIX III ABBREVIATIONS AND CONVERSION TABLES

III.1 ABBREVIATION LIST

ABBR.	EXPLANATION	UNIT
(m)	Metres	m
(MT)	Metric tons	MT
BW	Black water	-
CoG	Centre of gravity	m
DFA	Down flooding angle	Deg
Disp	Displacement	MT
DLO	Dirty lubrication oil	-
Draft AP	Draft at aft perpendicular	m
Draft FP	Draft at forward perpendicular relative to baseline	m
Draft MS	Draft at forward perpendicular relative to baseline	m
Draught aft	Draught at aft perpendicular relative to baseline	m
Draught fore	Draught at forward perpendicular relative to baseline	m
F/S Corr	Free surface correction	m
FO	Fuel oil	-
FSM	Free surface moment	MTm
FW	Fresh water	-
G'M	Initial stability, metacentric height: distance from KG to metacenter corrected for free surface moment, identical to: GM (fluid)	m
GM	Initial stability, metacentric height: distance from KG to metacenter	m
GM (fluid)	Initial stability, metacentric height: distance from KG to metacenter corrected for free surface moment	m
GML	Longitudinal metacentric height	m
GW	Grey water	-
GZ	Same as righting arm (RA)	m
KMT	Distance from baseline to metacenter	m
LCB	Longitudinal centre of buoyancy relative to aft perpendicular	m
LCF	Longitudinal centre of floatation relative to aft perpendicular	m
LCG	Longitudinal centre of gravity relative to aft perpendicular	m
Length o.a.	Length overall	m
Length w.l.	Length waterline	m
LO	(Clean) lubrication oil	-
MaxRA	Maximum righting arm	m
mld	Moulded	m
MTcm	Required trim moment to obtain a trim change of 1 cm	MT-m/cm
Perm	Permeability	-
R. area	Righting area under righting arm curve	mrad
TCB	Transverse centre of buoyancy relative to centreline plane	m
TCG	Transverse centre of gravity relative to centre line plane	m
TPcm	Required weight to obtain a draught change of 1 cm	MT/cm
VCB	Vertical centre of buoyancy relative to baseline	m
VCG	Vertical centre of gravity (relative to baseline)	m
WT	Watertight	-

FINAL STABILITY INFORMATION BOCKLET

III.2 CONVERSION TABLE

All units as used in this report are in the SI-units (Systeme Internationale). The use of SI-units is strongly recommended. Below a conversion table is shown:

Multiply by	To convert from	To obtain	-
0.03937	Millimetres	Inches	25.400
0.3937	Centimetres	Inches	2.540
3.2808	Metres	Feet	0.3048
2.2046	Kilograms	Pounds	0.45359
0.0009842	Kilograms	Tons (2240 lbs)	1016.047
0.9842	Metric tons (i.e. tonnes of 1000 kilos)	Tons (2240 lbs)	1.016
2.4998	Metric tons per centimetre	Tons per inch (immersion)	0.400
8.2014	Moment to change trim one centimetre	Moment to change trim one inch	0.122
187.9767	Metre radians	Feet degrees	0.0053
0.26417	Litre	US Gallon	3.7854
0.21997	Litre	Gallon	4.5461
-	To obtain	To convert from	Multiply by the above
